

### HOMELINK® WIRELESS CONTROL SYSTEM

<b>60HMLKV5GRY</b>	HomeLink w/Gray Bezel
<b>60HMLKV5TAN</b>	HomeLink w/Tan Bezel
<b>60HMLKV5BLK</b>	HomeLink w/Black Bezel

HomeLink®, the Wireless Control System that learns the codes for up to three remote control devices, is now newly redesigned offering more compatibility and an easier install. No more crowded visors with multiple remotes for garage door openers, security lights and entry gates. Now all these devices can be operated with dedicated buttons.

- Learns the codes for up to three remote control devices
- Newly redesigned offering more compatibility and an easier install
- Activates Radio Frequency-controlled garage door openers, home automated lighting, gate openers, access entry door locks, and more
- Can be easily programmed for security, efficiency, and convenience

### MOBILE HOME™ SIRI® INTERFACE

### We Found The Missing Link.

Mobile Home™ connects your factory or 3rd party Bluetooth® hands-free system/device with iPhone® or iPod touch® for complete control of Siri®/Voice Control®. **No wires. No annoying setup. No syncing. No apps.**

#### 55-M01001001

#### Mobile Home™ - take command of Siri® from the driver's seat!

By simply using your voice you can:

- Initiate phone calls from your iPhone®
- Compose and send emails
- Compose, send and listen to your text messages
- Post to Facebook
- Send tweets
- Check weather, sports scores and stock prices
- Manage your calendar and appointments
- Set reminders, alarms and timers
- Get turn-by-turn directions
- Look up a number to almost any business
- Call a restaurant for reservations while en route
- Control your streaming music
- All this and much, much more!

#### The Mobile Home™ Difference

Other Bluetooth® devices on the market are generally meant for vehicles WITHOUT hands-free functionality. These devices contain integrated microphones and speakers. This means the commands are given and responses are heard on the Bluetooth® device itself – NOT your in-car microphone and speakers. Why spend all that money and not use the in-car system? Mobile Home™ is the only purpose-built Bluetooth® device on the market currently which works WITH your existing in-car hands-free system. Commands are given to the existing in-car microphone and responses are heard thru the existing in-car speakers. Moreover, all existing telematics functionalities are left intact. Pick and choose which functions you want to use via which device.

Simple to use and DIY setup - no wires to connect or apps to download.

#### Minimum Requirements:

- Apple® iPhone® or iPod touch® with Siri®/Voice Control®
- Factory or 3rd party Bluetooth® hands-free car system/device

#### Included in the Box:

- Mobile Home unit
- Battery (CR2450)
- Visor clip
- VELCRO® Brand Sticky Back™ fasteners

### COBRA 12VDC-120VAC POWER INVERTERS
